Sequence 1333, Application US/09833381
Patent No. US20020132090A1
GENERAL INFORMATION:
APPLICANT: Robison, Keith E.
TITLE OF INVENTION: No. US20020132090A1e1 Nucleic Acid and Protein Homologs
FILE REFERENCE: 5800-119
CURRENT PEPLICATION NUMBER: US/09/833,381
CURRENT FILING DATE: 2001-04-11
PRIOR APPLICATION NUMBER: 09/516,448
PRIOR FILING DATE: 2000-02-29
                                                                                                                                                                                                            ValalaargasnGlyGluProGluProThrProValValTyrGlyGluLysGluProSer 120

// Lab host="mintor bill."
// Site 2: Not 1; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1966. Denatured RNA was size fractionated on a 1% agarose
gel: First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EooR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGACACG. This library was created for the University
low Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIWH), Hemin Chin, Ph.D.,
  Clone Distribution: MGC clone distribution information can be found through the I.M.G.E. Consortium/LLNL at: http://image.llnl.gov This clone was contributed by the Brain Molecular Anatomy Project

/site_2: Not I: The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcse
gel.First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, iligated
with EcoR I adaptor, digested with NotI and then cloned
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  775 bp mRNA linear EST 09-OCT-2003

/note="Organ: Bye; Vector: pXx- Asc; Site l: EcoR I;
Site 2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pXx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is TTATTGAAGT. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."

/clone lib="whole brain Vector: pXx Asc, Site_l: ECOR I;
Site_l: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:191-866,
1996. Denatured RNA was size fractionated on a 1% agarcs
gel.First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with ECOR I adaptor, digested with NotI and then cloned
directionally inco pXx Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CAGCCACGAC. This library was created for the University
lowa Brain Anatomy Project (MAMP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1956. Denatured RNA was size fractionated on a 1% agarcee gel. First strand CDNA synthesis was primed with Oligo-dr primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with Bcor I adaptor, digested with NotI and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CAGCACAGAC. This library was created for the University lows Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIME), Hemin Chin, Ph.D.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    191 AAGCTCCTGCAGAAGAAGCAGAGCCAGCTCGTGCAGGAGAACGACCATCTGCGAGGGGAA 250

cloned Denatured RNA was size fractional and all agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according tomRNA size fraction, ligated with
EcoR I adaptor, dispested with Not I and then cloned
directionally into pXX-Asc vector. Average insert size
